

## **Cloud Backup Services**

Data breaches, downtime, disaster and data losses happen more frequently than we'd like to believe. Business confronted with any of these issues tend to be reactive rather than proactive. Focusing on putting it behind them and getting on with business is more common than learning from the event and preventing it from occurring in the future.

It is our belief at ITPBX that the key to good data management is in the planning, scheduling and controlling the avalanche of sensitive information that financial systems process by the second. With Cloud Backup Service Solutions tailored specifically to the banking industry, compliance is never compromised and legal mandates are always fulfilled.

Several tools are built into our Cloud Backup Services that ensure our clients are never at a disadvantage when fulfilling compliance requirements or audits. Data is encrypted and kept in multi-tiered storage organized by level of importance.

We provide the banking industry solutions for key escrow management and password rotation support. Data is only destroyed at the request of the client and a certificate of destruction is provided.

ITPBX professionals provide expert technical service 24 hours, 7 days per week and respond promptly to all of our client inquiries. The solutions offered by ITPBX provide our clients with the safety and peace of mind they require.
